Namachozhan N

SENIOR DEVOPS / CLOUD & INFRASTRUCTURE ENGINEER

Dubai, UAE | +971 56 737 7360 | namachozhan.narayanasamy@gmail.com | linkedin.com/in/namachozhan

SUMMARY

Results-driven DevOps Engineer with 5+ years of experience in Azure cloud infrastructure, Kubernetes, Linux, and DevOps automation. Skilled in designing and managing scalable, highly available platforms using Terraform, Ansible, Docker, and Helm, and in building CI/CD pipelines with Azure DevOps, with SonarQube and Trivy for code quality and security scanning. Experienced in GitOps deployments using Argo CD, and in monitoring and troubleshooting production workloads with Azure Monitor, Azure Managed Prometheus, and Grafana. Hands-on with Python and Shell scripting to automate infrastructure and application delivery and developed an AI-powered Kubernetes troubleshooting agent to improve operational visibility and speed up issue diagnosis. Strong expertise in AKS platform management, production support, and ensuring application reliability. Proven track record of reducing manual effort, improving deployment reliability, and resolving critical production incidents through close collaboration with cross-functional teams in Agile environments.

TECHNICAL SKILLS

- **Cloud Platforms:** Microsoft Azure
- **Containers & Orchestration:** Kubernetes (AKS), Docker, Helm
- **CI/CD & Version Control:** Azure DevOps, Argo CD, Git, Azure Repos, GitHub
- **Infrastructure as Code & Automation:** Terraform, Ansible
- **Build & Security Tools:** Maven, npm, SonarQube, Trivy
- **Monitoring & Observability:** Azure Monitor, Prometheus, Grafana
- **Operating Systems:** Linux (Red Hat, Ubuntu, SUSE), Windows
- **Scripting:** Shell Scripting, Python
- **Methodologies & Collaboration:** Agile, Jira, ServiceNow
- **AI & Intelligent Automation:** AI Agent Development, Kubernetes Troubleshooting Agent, Cursor AI, LLMs, MCP) Retrieval-Augmented Generation (RAG), ChromaDB.

WORK EXPERIENCE

Infinite Computer Solutions – Senior DevOps Engineer **July 2025 – Present**

Client: Nokia

- Administered and supported production Azure Kubernetes Service (AKS) clusters, handling cluster upgrades, node pool management, application onboarding, cost optimization, and platform lifecycle management.
- Monitored Kubernetes workloads and cluster health using Azure Monitor, Azure Managed Prometheus, and Grafana, proactively identifying and resolving performance bottlenecks.
- Troubleshoot complex AKS issues across pods, deployments, networking, storage and ingress.
- Packaged and deployed Kubernetes applications using Helm charts, including chart customization, values-file configuration management, and release upgrades and rollbacks.
- Built and maintained Azure DevOps CI pipelines to automate application build, test, security scanning, and container image creation, reducing manual deployment effort.
- Implemented GitOps-based continuous deployment using Argo CD for automated, version-controlled, and reliable releases across Kubernetes environments.
- Provisioned and managed Azure infrastructure using Terraform, creating reusable Infrastructure as Code modules for AKS, networking, and supporting cloud resources.
- Migrated Kubernetes Ingress-based application routing to Gateway API using HTTPRoute, including routing validation and troubleshooting of service/route configuration issues without planned downtime.
- Implemented Azure Key Vault integration with AKS to securely retrieve and manage application secrets within Kubernetes pods, enabling secure communication between workloads and Azure Key Vault.
- Automated Kubernetes lifecycle activities, including pre-deployment validation, deployment, upgrade, rollback, post-deployment verification, and health checks, using reusable Ansible playbooks and roles with Python and Shell scripting.

- Gathered automation requirements from client and app teams, tracked work through Jira, and transformed operational MOPs into reusable automation workflows, reducing manual effort by approximately 70%.
- Designed and developed an AI-powered assistant using Cursor AI, LLMs, and MCP server integrations to support Kubernetes troubleshooting and cloud cost optimization.
- Developing a Python-based RAG ingestion pipeline to extract and chunk technical runbooks and PDFs, generate embeddings, and index knowledge in ChromaDB for context-aware retrieval.
- Developing a Proof of Concept (PoC) for conversational memory and RAG-based retrieval to improve response accuracy by leveraging relevant chat history and technical knowledge.

HCL Technologies – DevOps Engineer **Dec 2021 – July 2025**

Client: Chubb Insurance

- Managed Kubernetes environments, supporting application deployments, troubleshooting workloads, and ensuring platform stability.
- Developed and maintained CI/CD pipelines to automate application build, testing, and deployment processes.
- Automated server provisioning, configuration management, and routine tasks using Ansible playbooks.
- Provisioned and managed cloud infrastructure using Infrastructure as Code (IaC), improving deployment consistency and reducing manual effort.
- Administered Linux servers, Linux server patching, user management, and performance monitoring.
- Automated operational tasks using shell scripting to streamline deployments and day-to-day administration.
- Collaborated with development and QA teams to support application releases, troubleshoot deployment issues, and improve delivery efficiency.
- Participated in production support, incident resolution, root cause analysis (RCA), and change management activities while adhering to Agile practices.

CERTIFICATIONS & TRAINING

- Certified Kubernetes Administrator (CKA) | 2026
- Microsoft Azure Fundamentals (AZ-900) | 2026
- Red Hat Ansible Automation Workshop | 2024

ACHIEVEMENTS

- Received the Spot Award – Best Performer of the Month (February 2026) for automating 25+ Kubernetes-based CNF configuration use cases using Ansible.

EDUCATION

B.E. (Bachelor of Engineering)

Roever Engineering College, Perambalur, Tamil Nadu, India **2017 – 2021 | CGPA: 7.89/10**
